Convergence by breaking stereotype

The curved sectional
planes of human 3D
model parallel to surface
help us understand
how deep
the inside structures are.

Like the Russian
Matryoshka dolls.

It can be said that
sectional anatomy and
surface anatomy have
converged.

Stereo-
type

For such convergence,
we need to think
outside the box.

Broken stereotype: Sectional and surface anatomy are independent fields.

Smart phone is
a symbol of
convergence.

Broken stereotype:
Phone, audio player,
camera, computer are
independent instruments.

In academic meeting,
workshop is
the convergence of
working and shopping.

Broken stereotype:
Working and shopping
are independent activities.
