Three-dimensional (3D) models of monkey and human

Why did we reconstruct 3D models of monkey and human?

In order to make a movie where monkey and human star together?

Virtual experiment can be done with 3D model of monkey (A) and that of human (B).

For example, effect of electromagnetic wave can be assessed.

Actual experiment can be done with monkey (C) observing animal ethics,

while that cannot be done with human (X).

As intended, result of actual experiment with human (X) is predictable.

	Monkey	Human
Virtual	A	B
Actual	C	X

$$A : B = C : X$$

Are you confused about our similar appearance?
