Fig. S1. Changes in daily mean blood glucose concentration with respect to levels of renal function: standard-dosage regimen (0.5 unit/kg/day) (○) vs. reduced-dosage regimen (0.25 unit/kg/day) (●). The values in parentheses represent the percentages of normal renal function. The data are represented as the means + standard deviation (error bars). *P < 0.001; †P < 0.01; ‡P < 0.05.
